Benefits:

- The Registered Receipt[™] is the only evidence that needs to be stored to reconstruct the original transmission
- Self-authenticates without the need for third-party storage
- Reconstructs the entire transaction in native format, including content and attachments
- Can be forwarded for recipients to authenticate

RPost patented (rpost.com/patents) including US patent applications 17304,305, 15469388, 17025955, 17659479, 16866135, 17653923, 17663425, 63/201,857, 63/366,685, 63/366,661 and other applications.

The Power of Proof[™]:

The Registered Receipt[™] email record is a durable, self-contained, and self-authenticating proof record of the entire email transaction, returned to the sender for each Registered Email[™] sent. The Registered Receipt[™] authenticates and accurately reproduces the original email including attachments, without RMail or any third party storing a copy of the email, attachments or records.

HTML file reconstructs the transaction, is durable and self-contained.

Message status and metadata of the transaction is contained in XML format or can be extracted via API.

Authentication Record:

Authentication Record: When a Registered Receipt[™] email record is submitted to RMail, our systems authenticate the receipt's integrity and, if authentic, reconstruct the original message content along with forensic evidentiary transaction data.

The Receipt Authentication record reconstructs the original transaction without any storage anywhere except the Registered Receipt itself. And, if the original email was sent encrypted, the reconstructed message content also proves fact of encrypted delivery.

The Receipt Authentication record includes SMTP logs, SMTP history, HTTP records and DSN records.

The Authentication record reconstructs original email, including email content and attachments.

RPost patented (rpost.com/patents) including US patent applications 17304,305, 15469388, 17025955, 17659479, 16866135, 17653923, 17663425, 63/201,857, 63/366,685, 63/366,661 and other applications.
