RAPTOR™ AI

Rethinking Security, 3ʳᵈ Party & Vendor Risk in the Age of Rapid AI Change

AI Is NOT the Disruption.
The Pace of AI Change Is.

The New Risk: 3rd & 4th Party Exposure

Information no longer simply leaks and fades away. If sensitive content enters an AI model through a third-party workflow, an outsourced vendor, or a seemingly harmless app, it may not be forgotten.
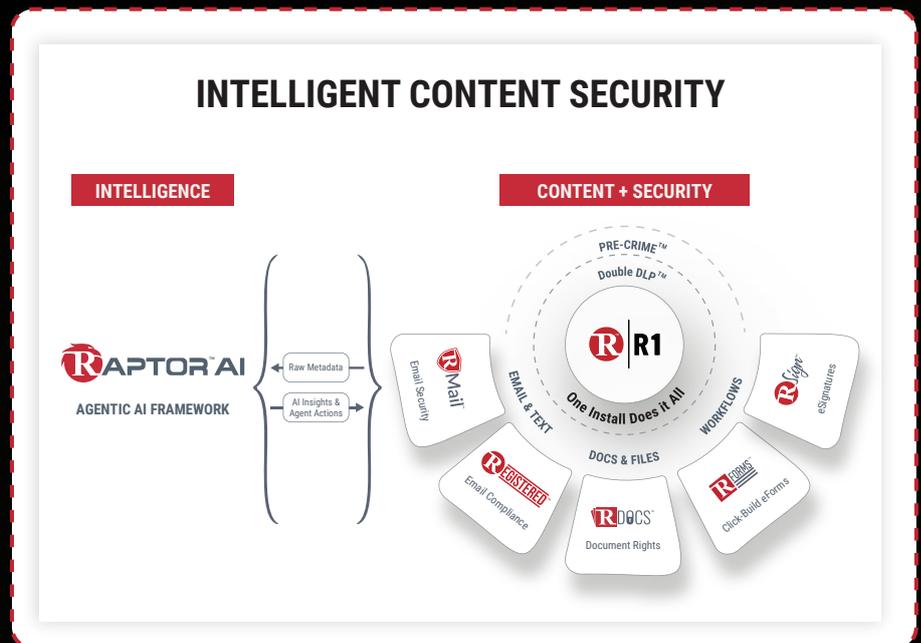

Organizations can write internal AI policies. But once information is shared externally, control shifts. And so does risk. This is where traditional perimeter-based security falls short.

PRE-Crime™: Seeing the Leak, Preventing the Breach

RPost introduces a patented PRE-Crime™ cybersecurity approach powered by RAPTOR™ AI. Instead of reacting after the incident, PRE-Crime focuses on:

- Generating continuous data from how messages, documents, and links are interacted with, even beyond your endpoints
- Actively hunting reconnaissance activity in real time
- Detecting leaks at less-resourced third and fourth parties
- Remotely killing exposed transactions before attackers weaponize them
- Attributing leaks to specific actors and recipients

This is not traditional DLP. This is pre-emptive leak intelligence.

Solving CIO Pain Points

Gartner's insights from discussions with 12,000 CIOs highlight recurring challenges. RPost addresses several of these directly:

1. **Data, Analytics & AI**

   CIOs need AI-ready data aligned to use cases. RAPTOR™ AI uniquely creates new, AI-ready protocol data that does not exist without RPost technology. This data becomes actionable intelligence for:
   - Third-party risk detection
   - Reconnaissance visibility
   - Leak attribution
   - Real-time risk intervention

2. **Modernizing the Application Portfolio**

   Legacy systems introduce hidden exposure gaps. RPost extends existing infrastructure without replacing it:
   - Transform outbound ERP and business system emails into Registered Email™ messages with certified proof and active threat hunting
   - Extend document control with RDocs™, enabling AI-infused remote content control without storing data
   - Enhance gateway protection with Double DLP controls, adding pre-emptive leak detection beyond traditional boundaries

3. **Cost Optimization Without Compromise**

   CIOs are under pressure to reduce costs while advancing transformation. RSign®, RPost's analyst-recognized eSignature and workflow automation platform, combines:
   - Advanced AI security
   - Legally binding audit trails
   - Productivity automation

   And delivers guaranteed 50% cost savings versus comparable platforms.
