

RMail Security Flow

RMail Outbound Cloud Security Platform most often acts as an extension of one’s existing inbound email security filters and outbound DLP services, with specialized Email Eavesdropping™ protection, elegantly easy and automated email encryption, and more.

US and non-US patented and patent applications including US18134480, US63632075, US18124419.

RMail services detect when a message should be sent encrypted and automatically transform it into a secure message that recipients can view with ease.

RPost’s RAPTOR™ AI model detects when sender information is leaking beyond your endpoints—inside third-party or even fourth-party systems—and attributes where that information is going, how it’s being exposed, and who’s likely seeing it.

With Email Eavesdropping™ threat hunting, senders have peace of mind that they will be alerted in real time if a cybercriminal has compromised their recipient’s email inbox. RMail then sends aggregate Email Eavesdropping™ red-alerts to administrators and, if desired, to their managed security service provider as well.
